### HOW TO REPLY TO THIS NOTICE:

#### I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-12 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. U. S. Patent No. 6,516,433 to Koenig is the reference closest to the claimed invention. Koenig discloses a method of defect root cause analysis comprising following steps: providing a die being processed through a plurality of semiconductor processes, wherein the die comprises a plurality of defects; dividing the defects into three defect types comprising a first defect type, a second defect type, and a third defect type according to their sizes and locations; performing a defect inspection to detect sizes and locations of the plurality of defects; performing a defect-to-failure matching step according to the characteristic of each defect to respectively generate a predicted failure region, the mapping analysis comprises: forming the defects of the-single die into a defect pattern; and comparing the defect pattern with a predetermined pattern on the-single die; analyzing the root cause of the defects according to the comparison between the defect pattern and the predetermined pattern on the die for determining the semiconductor process causing the defect. Koenig does not disclose expressly modifying the semiconductor process causing the defects to reduce the number of defects in the die. It is, however, considered inherent that Koenig modifies the semiconductor process causing the defects to reduce the number of defects in the die, because such modifying is known to be a necessary step in order that defects in the die

Art Unit: 2857

can be decreased and yield rate of a product line can be improved for a semiconductor factory. However, Koenig does not teach using three methods to perform performing a chemical state analysis corresponding to each defect type respectively of the single die; performing a mapping analysis according to a result of the chemical state analysis; and including all of the other limitations in the respective independent claims.

4. U. S. Patent No. 6,516,433 to Koenig in view of U. S. Patent No. 6,777,677 to Nozoe et al. are references closest to the claimed invention. Koenig disclose a method of defect root cause analysis comprising following steps: providing a die being processed through a plurality of semiconductor processes, wherein the die comprises a plurality of defects; performing a defect-to-failure matching step according to the characteristic of each defect to respectively generate a predicted failure region, wherein the mapping analysis comprises: forming the defects into a defect pattern; and comparing the defect pattern with a predetermined pattern on the die; judging a root cause of the defect generation according to the comparison between the defect pattern and the predetermined pattern on the single die for determining the semiconductor process causing the defect. Koenig does not disclose expressly modifying the semiconductor process causing the defects to reduce the number of defects in the die. It is, however, considered inherent that Koenig modifies the semiconductor process causing the defects to reduce the number of defects in the die, because such modifying is known to be a necessary step in order that defects in the die can be decreased and yield rate of a product line can be improved for a semiconductor factory. Nozoe et al. disclose performing a voltage contrast to identify locations of the defects; cutting the die

Art Unit: 2857

with a focus ion beam (FIB) to expose a cross-section of the die; and utilizing auger electrons to perform a chemical state analysis of the cross-section of the die. However, Koenig in combination with Nozoe et al. do not teach performing a mapping analysis according to a result of the chemical state analysis; and including all of the other limitations in the respective independent claims.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
